# How to solve the United Nations' Sustainable Development GCALS in 5 minutes

# SUSTAINABLE CITIES AND COMMUNITIES

# 

# <section-header>

# **Research Questions**

- How can generative AI augment creative problem solving?
- What are the implications of generative AI for human crowdsourcing of innovations?

# Setting

- Partnered with Continuum Lab, an AI company, and Freelancer.com to develop a crowdsourcing challenge about new business ideas on circular economy.
- Both human crowd solvers and human-AI (using GPT-4) submitted solutions.
- Human judges rated all solutions for their novelty and value.

# genai and creative problem solving 6

# Al-in-the-loop for creative problem solving

# **Summary of Findings**

Creating good business ideas in circular economy in the format of **Problem-Solution**.

Open call to human solvers

Human-Al: Prompt GPT-4

\*Poetz and Schreier, 2012

Novel solutions Human crowd

> = Creativity\* (novelty x value)

# The Potential of Large Language Models (LLMs) for Idea Generation

**Scalability**: LLMs can produce many ideas fast, efficiently, and cost-effectively.

**Diversity**: LLMs are trained on a vast amount of data and can generate various potential solutions or concepts via novel "recombinations".

Augmentation: LLMs, with strategic prompt engineering, can improve human productivity and creativity for well-defined organizational tasks.

Bubeck et al., 2023; Berg et al., 2023; Brands et al., 2023; Briot et al., 2017; Dell'Acqua et al. 2023; Felten et al., 2023; Girotra et al., 2023; Noy & Zhang, 2023; Otis et al., 2023

# **Crowdsourcing Process**

# • Humans:

- Launched crowdsourcing challenge on Freelancer.com from Jan – May 2023.
- **Received 125 eligible human solutions (after filtering).** -

# • LLMs:

- Used GPT-4 to generate solutions using strategic prompt engineering approaches (few-shot prompting, Chain-of-Thought, role-play, prompt chaining).

# **Evaluation Process**

- On Prolific: Out of 1000 individuals screened, 300 passed.
- Each Problem-Solution pair evaluated 16 times on average.

Freelancer  $\rightarrow$  Contest  $\rightarrow$  Academic Writing  $\rightarrow$  Join Harvard in Creating a Sustainable Future: Unlock

# Join Harvard in Creating a Sustainable Future: Unlock the Potential of a **Circular Economy - 30/01/2023 18:12** EST

Status: Closed

**Prize:** \$1000 Entries Received: 310

Winner: rashasafwat

### **Contest Brief**

THE CONTEST IS CLOSED AND WE ARE AIMING TO AWARD LAST SELECTED WINNERS BY 15TH OF MAY

We are excited to announce an opportunity for freelancers to collaborate with researchers at the Digital, Data, and Design Institute (D^3) (https://d3.harvard.edu/) at Harvard to source the most innovative and cuttingedge circular economy solutions for the business world.

Circular Economy is a simple idea.

Basically it involves sharing, leasing, reusing, repairing, refurbishing and recycling existing materials and products as long as possible.

We would like you to submit your circular economy idea, which can be a unique new idea or an existent idea that is used in the industry.

# genai and creative problem solving **13**

# **ChatGPT Prompting Instances**

Each distinct instance of GPT-4 generates its solution independently from the same input prompt

A single instance of GPT-4 generates multiple solutions successively, one at a time, with a differentiation instruction between successive

Prompt chaining

# genai and creative problem solving 14

# **Distribution of Mean Novelty and Value Ratings by AI Instance**

Figure 2. Density plot distributions of the mean novelty (Panel A) and value (Panel B) evaluator ratings by solution source and prompting configuration

Human-Al solutions 7% less likely to achieve top novelty rating than Human Crowd solutions. (p < 0.001)

No difference between multiple and single instance Human-Al and Human-Crowd top novelty rating. (p < 0.001)

Human-Al Single instance outperforms the average creativity of Human-Crowd outputs (p < 0.1).

## genai and creative problem solving **15**

# What would it take for AI to generate novel ideas?

Human crowd outputs are more innovative, including top novelty, but AI capabilities are advancing (e.g., GPT5, multi-modal & multi-agent LLMs, Retrieval-Augmented Generation (RAG) systems)

Innovation as recombination of ideas for AI?

FROM THE BESTSELLING AUTHOR OF EVERYTHING

BAD IS GOOD FOR YOU AND THE INVENTION

OF AIR

What about moonshot ideas?

# How to select and enhance the best ideas?

Crowdsourcing increases the variance in idea quality (both at the left and right tail)

# genai and creative problem solving 17

# Conclusions

- Human-guided AI, with prompt engineering, can produce creative outputs comparable to human solvers alone.
- Human-AI outputs are more valuable, a reflection of LLMs' training, fine-tuning, and alignment.
- Human crowd outputs are more innovative, including top novelty, but AI capabilities are advancing.

# genai and creative problem solving 18

# Conclusions

- Human-guided AI, with prompt engineering, can produce creative outputs comparable to human solvers alone.
- Human-AI outputs are more valuable, a reflection of LLMs' training, fine-tuning, and alignment.
- Human crowd outputs are **more innovative**, including top novelty, but AI capabilities are advancing.

# The Future of Creative Problem Solving

- Human-AI guided outputs can be a **cost-effective and scalable** approach to create multiple parallel paths, freeing up human resources for idea evaluation, selection, and implementation.
- Towards a Human-Al synergistic future:
  - Intellectual property rights and environmental impact (Rafner et al., 2023)
  - Human purpose vs. excessive dependence on LLMs, homogenization of outputs (e.g., Dell'Acqua et al. 2023; Doshi & Hauser, 2023)
  - Human-AI framework entails integrating AI-in-the-loop responsibly to augment, not replace creative thought.

Recruited evaluators (18+, U.S. only) on Prolific Each potential evaluator completed an initial screen for their interest, work experience, and knowledge in the circular economy. Evaluators with moderate or high interest, and either 2+ years of work experience, or 60% or more on the knowledge skills test passed the screen. Out of 1000 individuals screened, 300 passed.

![](_page_26_Picture_4.jpeg)

Each of the 300 evaluators passing the circular economy screen was then randomly assigned one out of 18 blocks of circular economy solutions. Each block contained 13 solutions: 3 human (H) and 10 Al solutions. Of the Al solutions, 5 were generated using a single (S) instance of GPT-4, and 5 were generated using multiple (M) instances of GPT-4.

Each evaluator rated the novelty, environmental, and financial value of each assigned solution. The value rating is an average of the environmental and financial ratings.
